

Data Warehousing and Data Mining
Mini Project

Name: Aman Sanjay Mishra

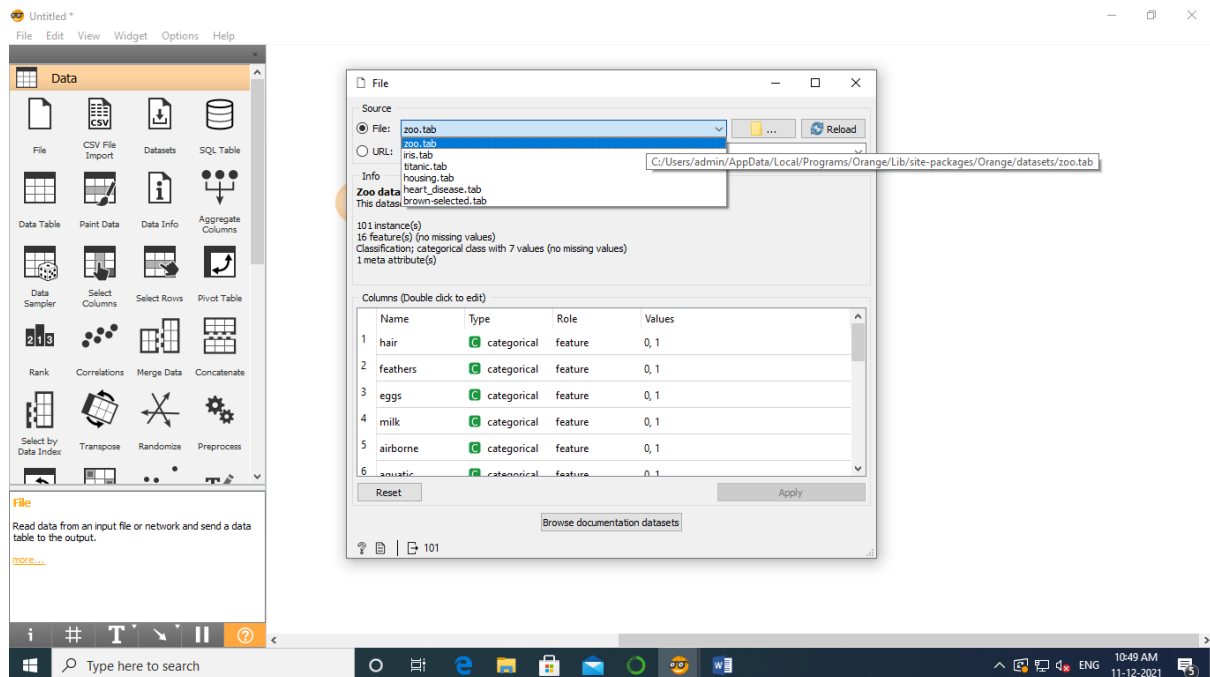

Roll no: 21

Aim: Classification using Orange tool

Step 1: Select file and drag & drop on screen.

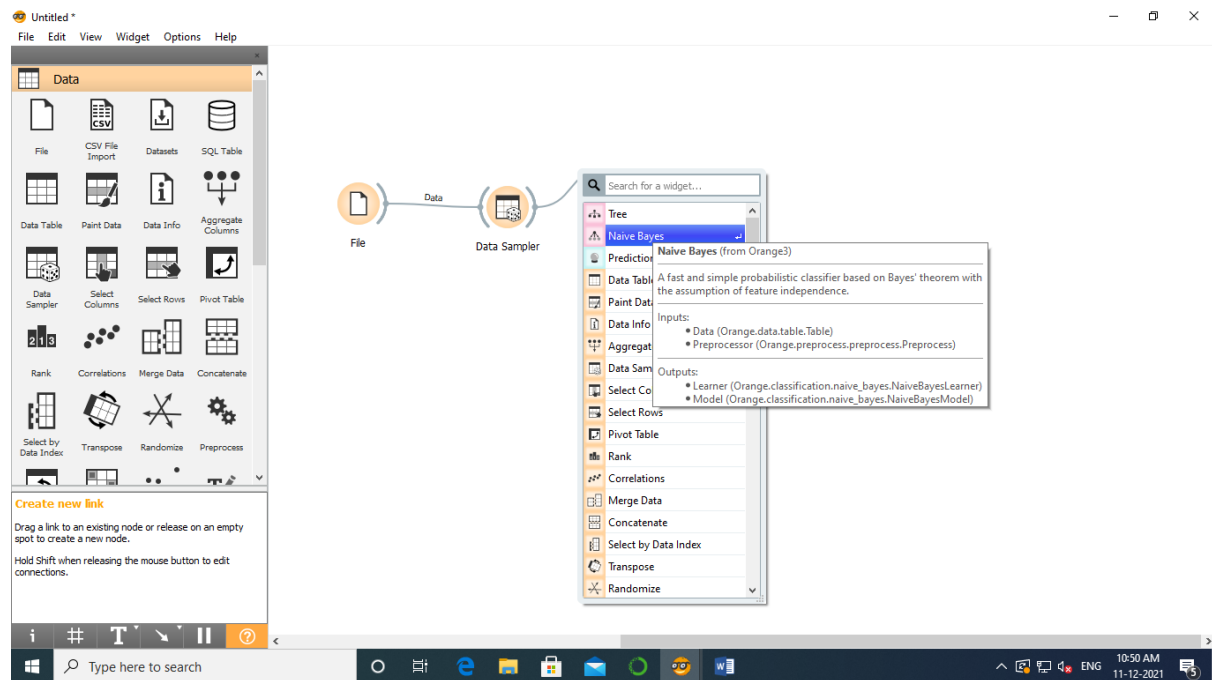

Step 2: Double click on file and select zoo.tab

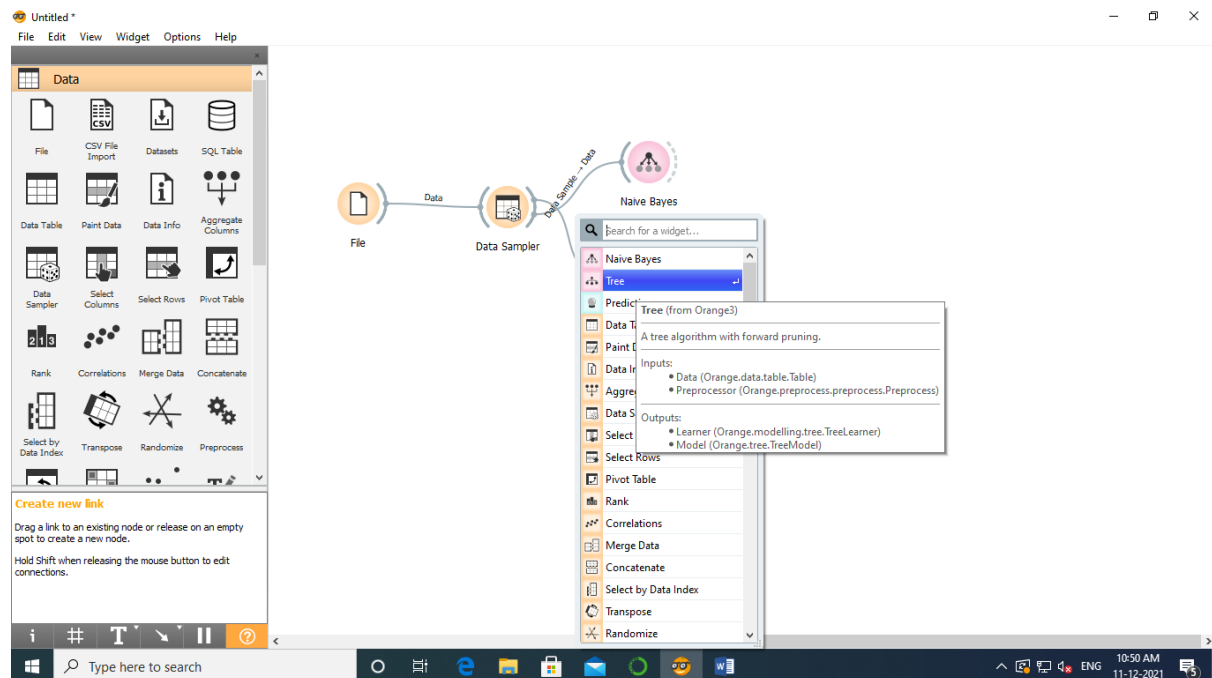

Step 3: Double click on screen and select Data Sampler and connect them both

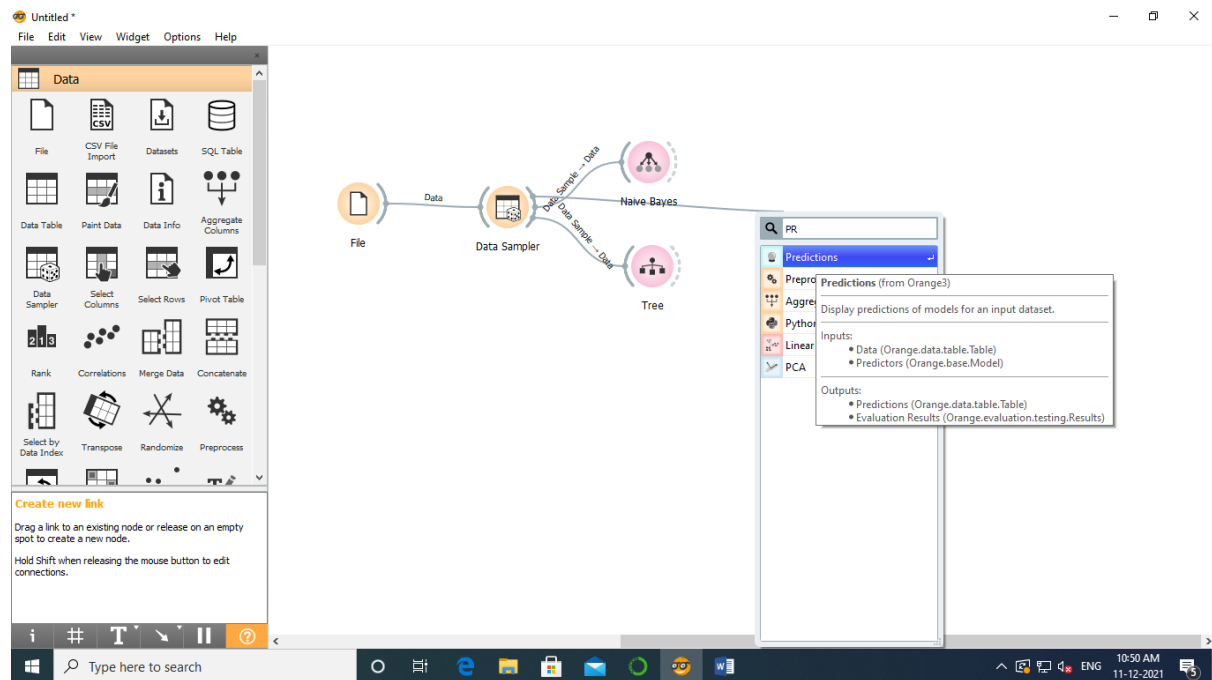

Step 4: Select Navie Bayes and connect it with Data Sampler

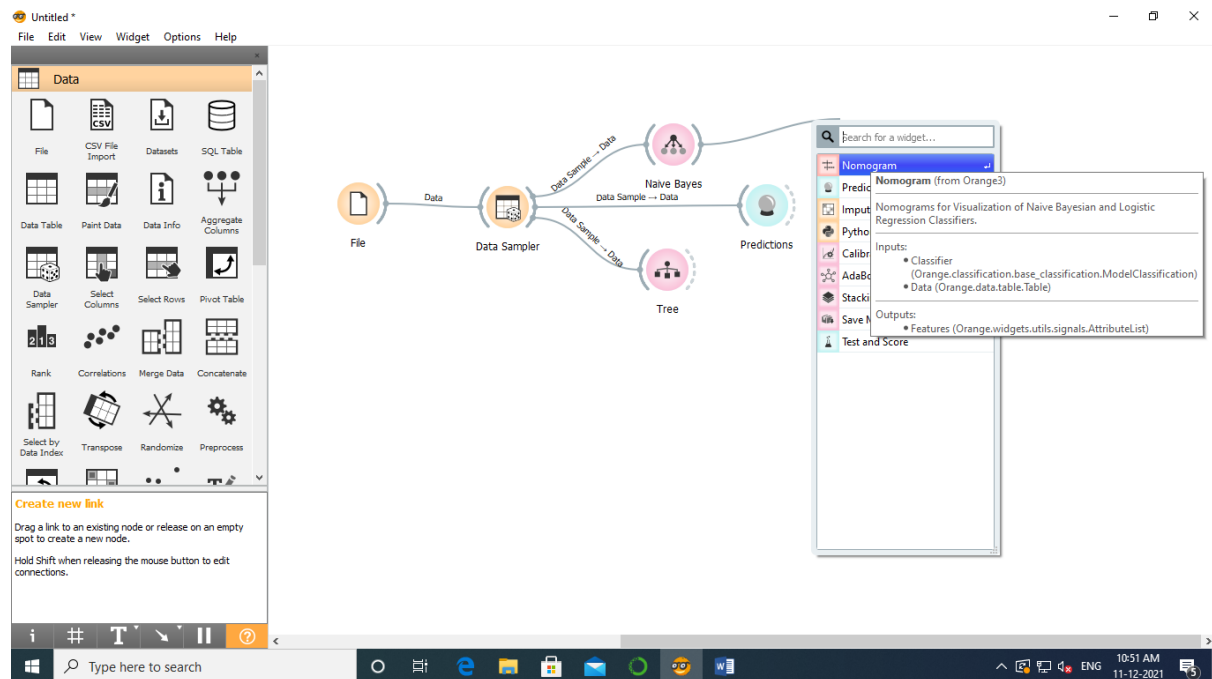

Step 5: Select Tree and connect it with Data Sampler

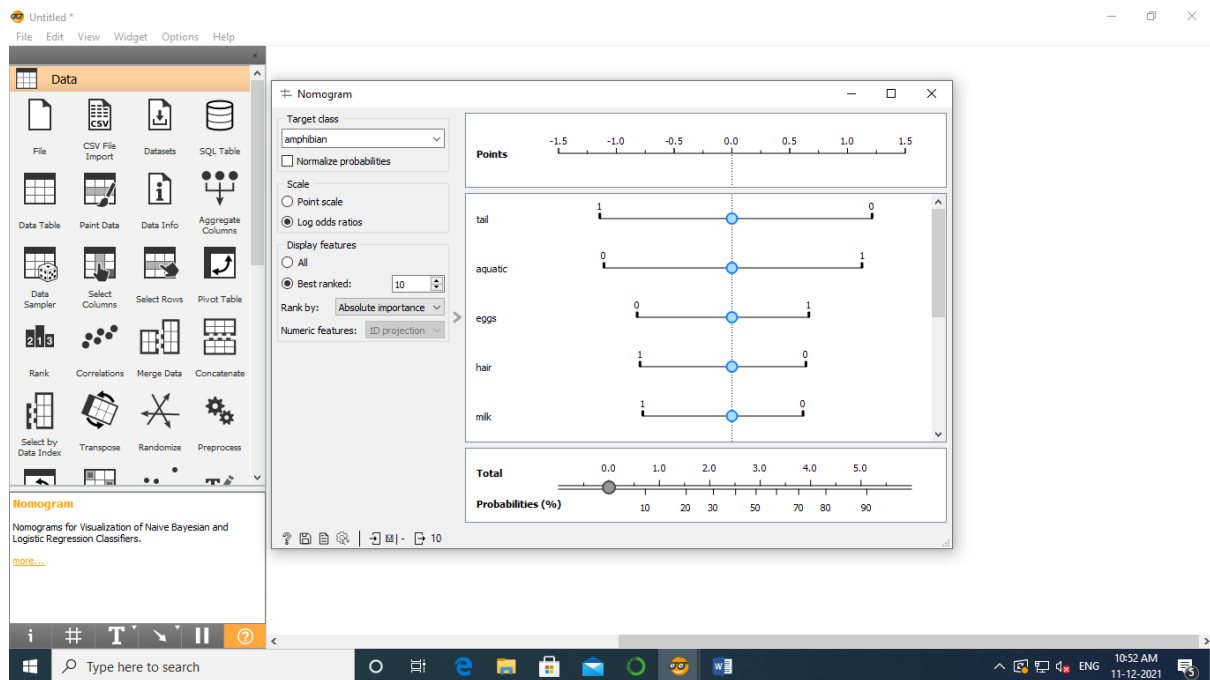

Step 6: Select Prediction and connect it with Data Sampler

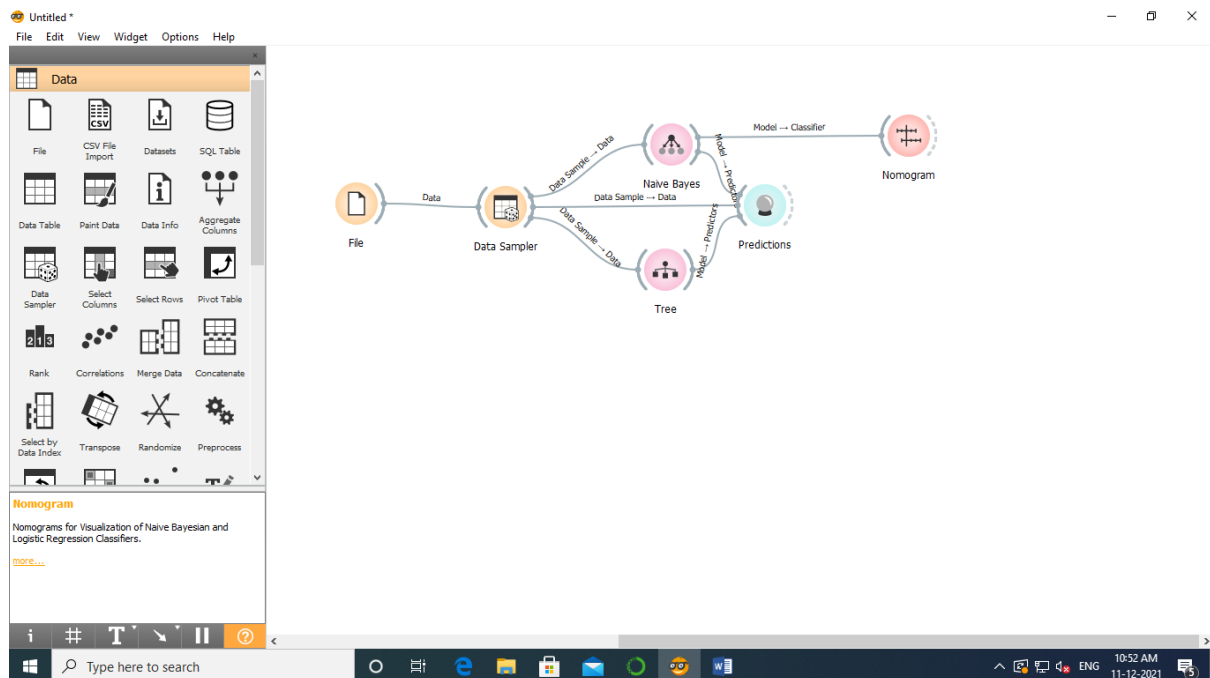

Step 7: Select Homogram and connect it with Navie Bayes and double click on homogram

Step 8: Select Navie Bayes and Tree with Prediction and double click on Prediction

Linear Projection (from Orange3)

A multi-axis projection of data onto a two-dimensional plane.

Inputs:

- Data (Orange.data.table.Table)
- Data Subset (Orange.data.table.Table)

Outputs:

- Selected Data (Orange.data.table.Table)
- Data (Orange.data.table.Table)
- Components (Orange.data.table.Table)
